Methadone is a powerful drug used for pain relief and treatment of drug addiction. Learn more about what methadone is, why it’s used, side effects, risks, and how to store and dispose of it. For an addiction, you’ll get it from a special treatment program. You can find programs through the Substance Abuse and Mental Health Services Association treatment locator (https://findtreatment.samhsa.gov) or by calling 1-800-662-HELP (4357). Methadone comes in tablet, powder, and liquid forms. You have to have a prescription to get it. Your providers will give you the dose that should work best for you. They also might change your dose during treatment. Tell your doctor how you feel when you use it. Don’t stop taking methadone without talking to them. Methadone maintenance treatment is the use of methadone, administered over a prolonged period of time, as treatment for someone who is addicted to opioids such as heroin, where detoxification has been unsuccessful and/or admittance to a substance abuse treatment facility requires complete abstinence. "Methadone maintenance makes possible a first step toward social rehabilitation" because it allows addicts to avoid the uncomfortable withdrawal symptoms that result from complete abstinence.
